

Vimari 2316 fitted in the socket

CE

FADINI
the gate opener
Made in Italy

Vimari 2316 is a manual post that can be removed from its seat, when required. Designed to delimit pedestrian areas or parking bays, the post has a cylindrical shape, a diameter of 200 mm, a height of 500 mm and is made of Fe steel, 5 mm thick. A cylindrical ground sleeve takes Vimari 2316 and holds it firmly in the ground; this socket is to be set into a concrete foundation, flush with the ground level.

Vimari 2316 can be unlocked by a specially shaped spanner (triangular profile as an option) and removed from its socket. During the movement operations, when the post is removed from its seat or brought back into it, the spanner has to be kept locked into its seat, as in this way it provides a handle to the post. It is made of Fe steel, cataphoresis treated and sprayed. All the inner component parts of the manual unlocking device are zinc-coated to improve corrosion resistance.

Vimari 2316 is fitted with a rubber edge, to protect the post head, and an approved, back-reflecting, sticker to make the post well visible at any time of the day and night, even in poor weather conditions.

Manual removal operations, when it is required to clear the passage and allow traffic to go through: push the cover flap open and insert the spanner into the hole, turn it clockwise to securely hold it in position and pull the post out with help of the other hand. Cover the socket with the plate provided with the equipment; treadable and carriageable cover.

Once movement operations are finished, turn the spanner anti-clockwise and remove it.

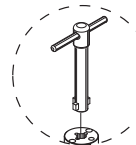

No adjustment or calibration are needed with this type of manual post, which makes it a very quick and easy unit to install and operate.

TECHNICAL DATA

| | |
|--|--|
| Full height | 500 mm |
| Post diameter | 200 mm |
| Post thickness | 5 mm |
| Complete protection standards | IP 55 |
